How many IC2 power storage units are there?

There are four power storage units from IC2; the most basic being the BatBox, then the CESU, followed by the MFE, and finally, the grand daddy MFSU. The BatBox can store up to 40,000 EU at one time. It outputs and inputs at 32 EU/t, or Low Voltage, which is effective for the basic IC2 machines. The second tier of storage is the CESU.

How much electricity does Saint Lucia have?

LUCELEC has an installed electricity generating capacity of 78.4 megawatts (MW), with peak demand of 60 MW. Most of the island's energy is produced from imported diesel fuel that powers electrical generators. Saint Lucia's electricity rates are more than triple the U.S. average.

Is Saint Lucia reliant on fossil fuels for electricity generation?

Like many island nations, Saint Lucia is almost 100% reliant on imported fossil fuels for electricity generation, leaving it vulnerable to global oil price fluctuations that directly impact the cost of electricity. Electricity Sector Data

Can a biomass plant be built in Saint Lucia?

A biomass plant requires large tracts of agricultural land and is not economically feasible. Rivers and waterfalls on Saint Lucia do not have a base flow rate sufficient to power water turbines. The most promising hydroelectric spot is the Roseau Reservoir, which can supply 150 kilowatts (kW).

Is LUCELEC's metering infrastructure reducing Saint Lucia's electrical losses?

Advanced metering infrastructure installed across 20% of LUCELEC's customer base in 2010 reduced technical and nontechnical electrical losses. Despite these efforts, Saint Lucia's transmission losses remain moderately high at more than 9%.

Not for starting ic2, you need your machines running with something to be able to get solar panels, the other option would be either lava for a magmatic gen from ic2 or a nuclear reactor; it's not like ic2 has tons of options for power, and only with mekanism cables you can convert from your main source.

The S155 Smart G2 AC charger handles up to 4S LiPo, LiFe, Li-Ion, or LiHV batteries, as well as 1-12S NiMH and NiCd packs (use Smart batteries to benefit from all charger features). Its sleek, sturdy case fits well on your workbench, and the power cord is detachable for easy storage and transport in pit and field bags.

For now, make sure you use the appropriate cable in the appropriate place. Also, Jeffroe888 is right about bat boxes. Once you've upgraded your power storage and understand how to use transformers to get the voltage you want, you should never have to mess with small storage devices again. One other note, it looks like you're going solar.

Batbox &gt; Universal Cable &gt; Flux Duct &gt; Refined Storage Controller . . . As a side note this is a problem you will have everytime you try to use power generators from IC2 to power almost every other mod, which is why I recommend switching off IC2 power to something else, like Steam dynamos or thermal generators - or even nuclear reactors if you ...

IndustrialCraft 2 (IC2) adds a variety of electrically-powered machines to the Minecraft world, bringing Minecraft to the Industrial Age and beyond. It offers machines that can double ore output and generate power, as well as nuclear power and quantum armor. This ...

There's also a difference in how the two sets of wires interact. In GC2 I would use IC2 wires everywhere except when I needed to power a buildcraft machine (buildcraft doesn't like IC2 wire.) I'd simply put an aluminum wire connecting the machine to the IC2 wire. It looked weird but worked wonderfully. However in GC3, the different wires won't ...
