

Saint Pierre and Miquelon solar panel 15kw system

How big is a 15 kW solar system?

Most solar panels have a capacity of around 300 watts. Therefore, to achieve a 15kW solar system, you will need at least 50 solar panels or more. Each panel takes up approximately 17 square feet of space, resulting in a total footprint of 850 square feet for the entire system.

How much does a 15kW solar system cost?

With a 15kW solar system, any excess electricity that you generate but don't use can be sold back to the grid. This means that you can earn money from the power you produce. With current electricity costs, you can expect a 20% return on your investment per year. The typical cost for a 15kW solar system is around \$30,000.

Why should you install a 15kW solar system?

By installing a 15kW solar system, you can significantly reduce your reliance on utility companies for electricity. The more self-generated electricity you use, the less you have to pay for from the utility company. This leads to substantial savings on your monthly electricity bills.

How many batteries do I need for a 15kW solar system?

For a 15kW system with lithium polymer batteries, approximately 95 kWh worth of batteries is required. It is possible to either purchase a single battery system with sufficient capacity or wire several smaller batteries together to achieve the desired power storage capacity. Is a 15kW Solar System Worth It?

Can a 15kW solar system save you money?

A 15kW solar system has the potential to save you a significant amount of money on your electricity bills. On average, this system can save up to \$4,654 per year. Over the 25-year lifetime of the solar panels, you can expect to save a total of \$116,344. The cost of electricity has been steadily increasing over the past four decades.
