What is Saudi Arabia's energy strategy?

The kingdom aims to increase its electricity generation capacity from 83 gigawatts (GW) in 2023 to 110 GW by 2028, supported by a \$293 billion investment in both conventional power and renewable energy projects. At the heart of this strategy is Saudi Arabia's goal to generate 50% of its electricity from renewable sources by 2030.

What type of energy does Saudi Arabia produce?

Energy in Saudi Arabia involves petroleum and natural gas production, consumption, and exports, and electricity production. Saudi Arabia is the world's leading oil producer and exporter. Saudi Arabia's economy is petroleum-based; oil accounts for 90% of the country's exports and nearly 75% of government revenue.

How much power does Saudi Arabia need?

Saudi Arabia has established a goal to source at least 50 percent of its power from renewable energy by 2030, expanding its capacity to 130 gigawatts (GW), 58.7 GW of which is expected to come from solar and 40 GW from wind. This target is the most ambitious of its kind among Gulf Cooperation Council (GCC) countries (Figure 1).

Why does Saudi Arabia have a high energy consumption?

Saudi Arabia's elevated per capita energy consumption, considerable electricity generation, expanding energy production and authorized power capacity, governmental backing for energy efficiency campaigns, and considerable prospective benefits from renovating structures underscore its endeavors and obstacles in the energy domain. 1.

Why is Saudi Arabia transitioning to independent power and water projects?

Saudi Arabia is transitioning towards independent power and water projects to address the escalating power requirements and broaden the array of energy sources via the National Renewable Energy Program. This will be accompanied by a substantial rise in non-oil government income and the private sector's contribution to GDP. 1.

Does Saudi Arabia need energy conservation policies?

Consequently, there is an urgent need to develop energy conservation policies for sustainable development. Electricity generation is 40% from Oil 52% from Natural Gas and 8% from steam. Generation capacity is approximately 55 GW. A looming energy shortage requires Saudi Arabia to increase its capacity.

Saudi Arabia has introduced the Saudi Green Initiative and the Middle East Green Initiative to elevate the presence of renewable energy sources in the primary energy ...
