What is shared Energy Storage (SES)?

As a new paradigm of energy storage industry under the sharing economy, shared energy storage (SES) can effectively improve the comprehensive regulation ability and safety of the new energy power system.

How can shared energy storage services be optimized?

A multi-agent model for distributed shared energy storage services is proposed. A tri-level model is designed for optimizing shared energy storage allocation. A hybrid solution combining analytical and heuristic methods is developed. A comparative analysis reveals shared energy storage's features and advantages.

What is a two-part price-based leasing mechanism of shared energy storage?

A two-part price-based leasing mechanism of shared energy storage is presented. The SES-assisted real-time output cooperation scheme for VPP is designed. An optimal bidding model of VPP in joint energy and regulation markets is proposed. The method based on ISV-MDA is proposed to allocate the cooperation profit of VPP.
