

# Silver energy Azerbaijan

Where does energy come from in Azerbaijan?

Two-thirds of energy in Azerbaijan comes from fossil gas and almost a third from oil. Azerbaijan is a major producer of oil and gas, much of which is exported. Most electricity is generated by gas-fired power plants.

How much electricity is produced in Azerbaijan in 2022?

Electricity generation in Azerbaijan has increased by more than 50% since 2010, amounting to 29.0 TWh in 2022. It is mostly generated by natural gas (more than 90% in 2022). Azerbaijan's sole refinery produced around 6.5 Mt of oil products from domestic crude oil and natural gas liquids in 2022.

Which energy sources are used in the transport sector in Azerbaijan?

Most oil products used in the transport sector are produced in Azerbaijan. TFC consists mainly of natural gas (43%) and oil products (39%), followed by electricity (15%). Renewable energy sources, including hydro, contributed 1.5% to total energy supply in 2022 and 6% (1.8 TWh) to electricity supply.

How much energy does Azerbaijan need?

Azerbaijan's energy demand (measured as total energy supply [TES]) was 16.1 million tonnes of oil equivalent (Mtoe) in 2022 (according to preliminary data from the State Statistical Committee). Azerbaijan is a major producer of crude oil (32.7 Mt including natural gas liquids in 2022) and of natural gas (35.0 bcm in 2022).

What minerals does Azerbaijan produce?

(January 2010) As of 2017, Azerbaijan produced a range of metals and industrial minerals, including aluminum, bentonite, copper, gold, iodine, limestone, silver and steel. Azerbaijan's importance as a world mineral producer, however, was based on its petroleum extracting industry.

What is Azerbaijan's major mineral wealth?

Azerbaijan's major mineral wealth is its oil and gas reserves. Offshore hydrocarbon structures in the Caspian Sea accounted for most of the country's oil and gas production.

It should be noted that Azerbaijan's renewable energy potential is estimated at 27,000 MW, with 23,000 MW from solar energy and 3,000 MW from wind energy. Solar energy production can be organized across almost the entire territory of the country, while Baku, the Absheron Peninsula, and the Khizi region are particularly favorable for wind energy.

Azerbaijan is one of those countries where windmills could be a perfect fit due to geographical location. In particular, the Absheron peninsula, coastline of Caspian Sea and islands in the northwestern part of Caspian Sea, the Ganja-Dashkesan zone in the west of Azerbaijan and the Sharur-Julfa area of the Nakhchivan Autonomous Republic are favorable areas.
