Why aren't solar-powered cars practical? A typical home needs a solar array covering 500 square feet to produce as much power as the people inside need in a year. Ideally, those panels are placed on a south-facing roof with an optimum tilt of about 30 degrees, give or take a few. A few years ago, we did the math on how many solar panels you need to charge an electric car.

Solar carports are typically built with steel or aluminum frames and covered with solar panels before being connected to an existing pole or building for stability. The typical ROI is between 5-7 years, which means you can expect to see a ...
