

This system uses 100% renewable energy, with a 95.6% renewable energy penetration in three regions. The most effective option for electrification in these locations is the PV/DG/battery combination. In Ref. [54], the viability of a hybrid, grid-isolated renewable energy system has been checked for electrifying Dongola, Sudan. Employing a ...

Sudan's renewable energy potential. Sudan's vast geographical area, its abundant sunshine, and the high wind speed in some regions mean that the country could create sustainable geothermal, solar, and wind RE production [Citation 44]. The Ministry of Energy and Petroleum stated the government's interest in exploiting additional RE ...

Off-grid electrification in remote areas by means of renewable-based energy systems is needed to achieve main sustainable energy goals [1]. The rapid decline in technology costs is making renewable energy solutions a cost-competitive choice to extend electricity access in many unelectrified areas [2]. There is great potential to hybridize or even replace off-grid ...

This paper aims to design a renewable energy system, to meet the electrical load demand of large-scale reverse osmosis desalination plant (1500 m³/d), and to find the optimal sizing and techno-economic and environmental feasibility assessment of several off-grid power systems. Two off-grid scenarios with different combinations of hybrid power ...

For many people, powering their homes or small businesses using a small renewable energy system that is not connected to the electricity grid -- called a stand-alone system -- makes economic sense and appeals to their ...

Techno-economic feasibility analysis of an off-grid hybrid renewable energy system for rural electrification. J. Electr. Electron. Eng., 9 (1) (2021), p. 7. Crossref View in Scopus Google Scholar [4] ... Feasibility study of a standalone hybrid energy system to supply electricity to a rural community in South Sudan. Sci. Afr., 16 (2022), p. e01157.

Recent events have reduced the otherwise steadily increasing annual percentage of the global population with access to electricity for the first time in years [1]. Due to long distances to grid infrastructure, off-grid renewable energy systems are economically viable options to provide larger electricity access in developing regions like sub-Saharan Africa [[2], [3], [4]].

This study performed HPS optimization with PV-DG-ESS for off-grid rural electrification in Sudan. The optimal size of the off-grid HPS components was determined by conducting ... Techno-economic optimization of an off-grid hybrid renewable energy system using metaheuristic optimization approaches - case of a radio transmitter station in India ...

Due to substantial cost reductions and reduced environmental footprints, photovoltaics (PV), wind-power, and battery storage have made the installations of new carbon-fuel power plants increasingly scarce and expensive [1], [2]. The fundamental transformation of energy systems is occurring due to the increasing share of electricity-based end uses like e ...

(DOI: 10.1016/J.ENCONMAN.2019.06.085) This article is published in Energy Conversion and Management. The article was published on 2019-09-15. It has received 165 citations till now. The article focuses on the topics: Renewable energy & Diesel generator.

Microgrid Systems: Falling somewhere between on-grid and off-grid systems, a microgrid is a localized energy system that can operate independently or in conjunction with the central grid [38, 39]. Microgrids often incorporate multiple types of renewable energy sources, and possibly some conventional ones, along with energy storage solutions.

Off-grid renewable energy solutions to expand electricity access: An opportunity not to be missed Community and citizen empowerment Local value creation Socio- ... solar systems in East Africa 8 OFF-GRID RENEWABLE ENERGY SOLUTIONS TO EXPAND ELECTRICITY ACCESS: a. Population served b. Capacity 0 7000 6000 5000 4000 3000 2000

The ability to integrate both renewable and non-renewable energy sources to form HPS is indeed a giant stride in achieving quality, scalability, dependability, sustainability, cost-effectiveness, and reliability in power supply, both as off-grid or grid-connected modes [15] sign complexity has been identified as the major drawback of HPS.

In this paper, we performed a techno-economic analysis for several locations for an off-grid renewable hybrid energy system to produce power and hydrogen. We also analysed how the sizing of a system component, NPC and COE varied in different locations based on the same load demand. Nine different renewable energy systems were simulated by HOMER ...

This article investigates Sudan's renewable energy policies and the country's potential to maximize renewable energy production. It argues that Sudan has great potential to secure a sustainable energy supply by switching ...

This paper provides a comprehensive feasibility analysis of an off-grid hybrid renewable energy system for the design of a water-pumping system for irrigation applications in Sudan. A systematic and holistic framework combined with a techno-economic optimization analysis for the planning and design of hybrid renewable energy systems for small ...

It's become widely recognized that a centralized grid alone cannot meet Africa's energy access needs, especially in rural areas. Off-grid renewable energy solutions, on the other hand, are proving to be the most

effective and least costly option. They are rapidly transforming rural communities, bringing sustainable and affordable electricity to areas that ...

This review paper assesses the status and findings of 100% renewable energy (RE) system analyses for Africa published in scientific journals. The 100% RE topic is rarely researched with regard to Africa; only 54 peer-reviewed articles exist for the entire continent, which is about 7% of the global total (750 articles) while reflecting almost a quarter of the world ...

(DOI: 10.1109/ICIEA.2019.8834172) The development and growth in renewable technologies, practically photovoltaic (PV) arrays and wind turbines (WT) have the key role to achieve the worldwide goal towards sustainable energy systems. Hybrid renewable energy system (HRES) can provide safe, eco-friendly and economic solutions for supplying the electrical load ...

*Integrate renewable energy in the power system of the Sudan with a target of 20 per cent by 2030 including Wind energy - 1,000 MW (grid connected); Solar PV energy - 1,000 MW (on- and off -grid); Solar CSP technology - 100 MW (grid connected); *Waste to Energy: -80 MW (grid connected); Biomass Potential - 80 MW (grid connected); Small

A country rich with renewable energy resources, like Sudan, needs to enhance investment promotion measures to attract both domestic and foreign investors. There is the need to raise awareness among local financial institutions about the ...

This has fostered renewable energy resources as an off-grid system for rural electrification, domestic and commercial purposes in numerous locations around the globe [14, 15]. Several countries in SSA have recognized the benefits of integrated energy systems and have taken steps in that direction, from developing small-scale microgrids for ...

With more than a billion people lacking access to electricity, local power-generation solutions are essential to provide sustainable energy to all - particularly those consumers expected to remain isolated from national or regional grids for the foreseeable future. Renewable power generation provides low-cost solutions to bring reliable electricity to rural ...

related dividends of renewable energy; and attracting more public and private investment through de-risking mechanisms. Integrating renewable energy into peacebuilding efforts and facilitating financing of community-led off-grid projects are crucial for harnessing its full potential. It is time to translate this potential into action. 1

Developing hybrid renewable energy systems in off-grid or grid-connected modes is the best way to overcome developing countries' economic and energy crises. However, the development of hybrid renewable energy systems faces severe technical and related economic challenges. ... In 2019, a case study was performed in Dongola, Sudan, for rural ...
