How efficient is the glass industry?

Status and prospects of energy efficiency in the glass industry are presented. The investigation of energy performance is based on energy data and modelling. Alignment with best practice suggests a sectoral improvement potential of 10 %. Renewable penetration plays a key role for electrification and hydrogen viability.

Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

Why is renewable penetration important in the glass industry?

Renewable penetration plays a key role for electrification and hydrogen viability. The versatility of the method facilitates the extension to hard-to-abate sectors. The significant share of energy-related emissions in the glass industry necessitates robust energy efficiency strategies.

How do I evaluate potential revenue streams from energy storage assets?

Evaluating potential revenue streams from flexible assets, such as energy storage systems, is not simple. Investors need to consider the various value pools available to a storage asset, including wholesale, grid services, and capacity markets, as well as the inherent volatility of the prices of each (see sidebar, "Glossary").

How much energy does the glass industry use?

From a sectoral perspective, the total energy consumption of the glass industry is estimated to be around 350 PJ in the EU, around 200 PJ in the US, and in the range between 500 and 800 PJ worldwide.

How can energy storage be profitable?

Where a profitable application of energy storage requires saving of costs or deferral of investments, direct mechanisms, such as subsidies and rebates, will be effective. For applications dependent on price arbitrage, the existence and access to variable market prices are essential.

Let's cut to the chase: profit analysis related to energy storage systems isn't just for engineers in lab coats. Whether you're a solar farm owner, a factory manager tired of peak ...

For instance, under current storage prices, our analysis shows that the "Commercial Technician" type of user would not generate sufficient profit to justify regular use of the V2G service. ...

The profit of an enterprise energy storage power station hinges upon several critical factors: 1. Initial investment cost, 2. Operational efficiency, 3. Market dynamics, 4. ...
