

# Who will implement the water storage project

Which water storage projects have been built?

But none of the more than half-dozen water storage projects scheduled to receive that money have been built. The largest project by far is a proposed lake in Northern California, which would be the state's first new reservoir of significant size in more than 40 years. People have talked about building the Sites Reservoir since the 1950s.

How many acre-feet does a water storage project need?

In accordance with the IIJA, as amended by P.L. 117-328, projects must have a water storage capacity of not less than 200 acre-feet and not more than 30,000 acre-feet. A third funding opportunity was republished in July 2025.

What is the Bureau of Reclamation's small storage program?

The Bureau of Reclamation's Small Storage Program was authorized by sections 40901 (1) and 40903 of the Infrastructure Investment and Jobs Act (IIJA) to promote Federal assistance to enhance water storage opportunities for future generations in support of the Department of the Interior's priorities.

Will California borrow billions to build more water storage projects?

It's been seven years since California voters agreed to borrow billions of dollars to build more water storage projects.

Why is water infrastructure important?

More people will finally be able to freely swim, fish, and play in their waters. Wild spaces will be cleaner and more vibrant. Communities will benefit from improved economic prosperity built on clean water resources as more quality, good paying jobs are created. Find resources and information related to water infrastructure.

Why is water storage important in California?

Storage was once the centerpiece of California's water management strategy, highlighted by a building bonanza in the mid-20th century of a number of dams and reservoirs.
