

What should New Zealand do about wind energy development?

In the future, the New Zealand government should formulate policies related to wind energy development, address challenges related to wind energy development, financial incentives and subsidies, local support, and formulate effective wind energy implementation plans to stimulate and explore the use of wind energy fully.

Why is offshore wind energy important in New Zealand?

Both onshore and offshore wind energy will be needed to meet New Zealand's increasing demand for clean energy. Offshore wind farms harness the typically stronger and more consistent winds found out at sea and don't take up valuable land. Does it affect our fishing industry? Offshore wind farms are typically built quite a long way out at sea.

Why should New Zealand invest in small wind farms?

If New Zealand vigorously promotes small wind turbines, it will contribute to the rapid development of New Zealand's wind power generation. Small-scale wind farms will also reduce New Zealand's primary energy for electricity and emissions.

How can we harness wind energy in New Zealand?

Given the many challenges to the development of large-scale wind power in New Zealand, another way to effectively harness wind energy is to develop small-scale distributed generation (DG), also known as the 'micro-generation'.

What is the wind industry like in New Zealand?

However, prior to 2004, the wind industry in New Zealand was slow to develop. The use of large wind turbines (capacity > 1 MW) in the construction of the 90 MW Te Apiti wind farm marked a step-change in the wind industry. Currently, the smallest one is the Southbridge wind farm located in Canterbury, with a 0.1 MW turbine only.

Does Meridian Energy have a wind farm in New Zealand?

Many small windmills serve as windpumps on New Zealand farms. Meridian Energy also operates a 1 MW wind farm on Ross Island, Antarctica. It is not included in the above list as it does not contribute electricity to the New Zealand national electricity network.

Where our energy comes from. Around 60% of New Zealand's energy is supplied by fossil fuels. Once energy losses and distribution are taken into account, fossil fuels make up about 70% of our total final consumption. This includes petrol ...
