continuous microgrids in the United States as of February 2021, based on known microgrids and upcoming installations incorporating multiple technologies and/or serving multiple buildings. The majority of CHP microgrids do not incorporate other DER technologies, but for those that do, solar PV is the most common

The proposal envisages work in two phases. The first is to start with a small trial implementation (Exploratory Microgrid) with technologies that are currently at an advanced stage of development at IITM, and work on an energy management grid operation strategy. This is expected to lead to a demonstrable microgrid system operation at the end of the first phase.
